

Essential IDD Healthcare Training for Clinicians

The simplest way to build IDD healthcare expertise at your organization — no in-person trainer required.

When we educate clinicians, **we save lives.**

ReplacingRisk.com

Curriculum in IDD Healthcare eLearn

Created by a clinician for clinicians

Six modules that teach practical skills that improve clinical competence in the provision of healthcare to people with intellectual and developmental disabilities (IDD).

Used by health professional training programs and practicing clinicians to teach the fundamental principles of IDD healthcare.

Numerous real-world case studies are used to illustrate concepts that help students and clinicians at any level improve their skill set and provide competent, compassionate healthcare to people with complex neurodevelopmental, medical, and mental health conditions.

Duration: 4.5 Hours

5 CME | 6 Nursing CEU Credits

Course Module:

1. IDD Basics: Then, Now and Next
2. Healthcare Basics in IDD
3. Common Behavioral Presentations of Medical Conditions in People with IDD
4. Dual Diagnosis in IDD
5. Effective Communication for IDD Healthcare
6. Bringing it All Together: Case Studies in IDD Healthcare

Unlock the Language of Behavior

- ✓ **Learn how behavior can point to specific underlying medical causes.**
- ✓ **Improve communication between clinicians and supporters.**
- ✓ **Gain useful insight from real-life case studies.**

Clinicians who complete the course are eligible to receive the IntellectAbility Recognized Provider in IDD Healthcare award, indicating their commitment to providing quality healthcare to people with IDD.

An independent, peer-reviewed study demonstrated that the *Curriculum in IDD Healthcare* (CIDDH) is effective in improving clinicians' knowledge of IDD healthcare.

From the study's authors, John P. Bartkowski and Xiaohe Xu:

"Highly effective results were especially evident in measures of the program overall, where the presentations were rated with respect to expectations, improvement of a trainee's medical practice, presenter knowledge, and willingness to recommend the training to others."

"CIDDH often proved to be quite effective. In many cases, superlative (highest possible) ratings outnumbered the combination of mid-range and deficient ratings by a factor of 3 to 1, meeting or exceeding the 75% superlative response threshold."

"By addressing the unique needs of individuals with IDD, healthcare training programs like CIDDH can reduce health disparities and improve the quality of life among patients with IDD."

"Every clinician should be prepared to provide knowledgeable, respectful, and effective care for people with intellectual and developmental disabilities. Training in IDD healthcare is not optional—it is essential to quality care."

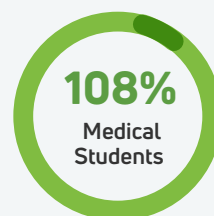

- Craig Escudé, MD, FAAFP, FAADM, FAAIDD

Participants in a separate study conducted by William Carey University College of Osteopathic Medicine about the efficacy of *Curriculum in IDD Healthcare* were asked to rate their ability to deliver effective medical care to people with IDD prior to the course and after the course.

The online course was successful in increasing the students':

- ✓ Knowledge of IDD healthcare
- ✓ Confidence in treating people with IDD
- ✓ Ability to deliver effective medical care to people with IDD

Improved Confidence by:
